

*SIG Corpoplast, SIG Plasmax and SIG Asbofill at BRAU Beviale 2007*

### **Value added Bottling**

The companies of the SIG Beverages Division will once again be present at BRAU Beviale in Nuremberg from 14 to 16 November.

SIG Corpoplast, SIG Plasmax and SIG Asbofill will present their competence in stretch blow moulding technology of PET, PET bottle development, barrier coating and aseptic filling on a joint stand (No. 343) in hall 15 under the motto „Value Added Bottling“. The three companies and their equipment perfectly complement each other, particularly in the field of filling sensitive goods such as juices or dairy products.

On their booth SIG Corpoplast will be showcasing a Preferential Heating blowing station for optimized wall-thickness distribution in strongly ovalized bottles. Another blowing station is equipped with the Speed-Loc quick-change system demonstrating the continuous development of the BLOMAX III series stretch blow moulding machines.

The PLASMAX barrier coating system will be explained at a complete PLASMAX coating station and a symbolized aseptic zone of an Asbofill filler, which demonstrates the extremely low space requirement of 0.9 m<sup>3</sup>.

With „Value Added Bottling“ the three SIG companies put their extensive experience and know how in the PET business as the focus of their BRAU Beviale 2007 presentation. This comprises the broad offer of added value from the bottle development to the filling process.
